# ROAM AT A GLANCE

ROAM is a student engineering team at the University of Calgary's Schulich School of Engineering. We design, build and field-test autonomous robots for mapping, inspection and environmental monitoring.

| ACTIVE MEMBERS | DISCIPLINES ON ONE TEAM | 3D MAPPING SCANNER BUILT (ARGOS) | AUTONOMOUS ROVER IN ACTIVE BUILD (ATLAS-1) |
|---|---|---|---|
| 50+ | 5 | 1 | 1 |

## [ WHAT WE DO ]

Members get hands-on experience with robotics, SLAM, computer vision, embedded electronics, mechanical design and field-ready system integration. Engineering, software, geomatics and business students work side by side, the same way a real product team does.

## [ WHY IT MATTERS ]

Autonomous systems are changing construction, energy, surveying and environmental science. Alberta needs engineers who have already built them. ROAM is where they get that experience, before they graduate and join your team.

## [ THE OPPORTUNITY ]

ROAM partners with companies that want access to this talent, visibility in Calgary's engineering community, and a real robotics platform to engage with. The rest of this package shows what that partnership looks like and what you get in return.

# WHY PARTNER WITH ROAM.

Four concrete returns, delivered over a 12-month partnership.

[01]

## TALENT ACCESS

A direct line to 50+ engineering, software, geomatics and business students who already work with LiDAR, SLAM, embedded systems and autonomy. We share your job and internship postings with members and host recruiting sessions on campus.

[02]

## BRAND VISIBILITY

Your logo on the ATLAS-1 rover, team apparel, our website and showcase signage, plus dedicated features on LinkedIn and Instagram. Seen at university events, demo days and competitions.

[03]

## TECHNICAL ENGAGEMENT

Your engineers can mentor a subsystem team, run a workshop, or field-test your hardware and software on a working robotics platform. You get real feedback from people using your product.

[04]

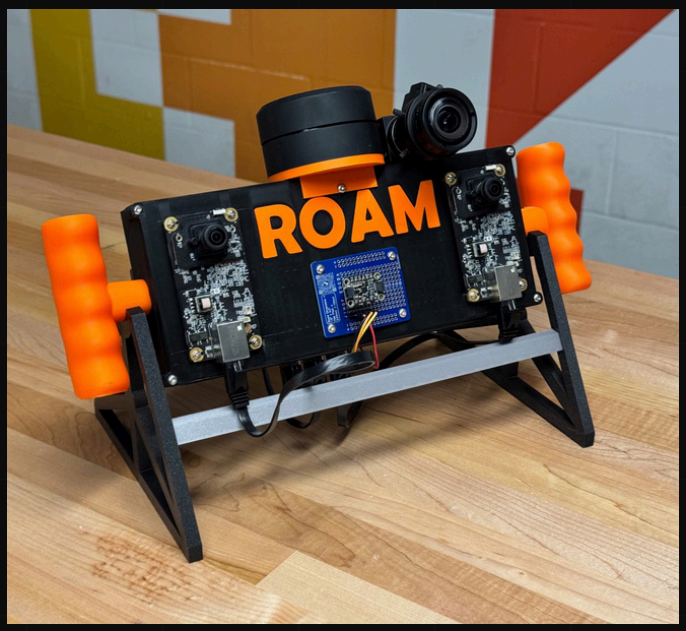

## COMMUNITY IMPACT

Support applied engineering education and Alberta's next generation of technical talent. Your contribution builds real hardware and real skills, and we report back on exactly where it went.

[ WHO YOU REACH ]

MECHANICAL | ELECTRICAL | SOFTWARE | GEOMATICS | BUSINESS

# PROVEN: ARGOS

[Completed Project]

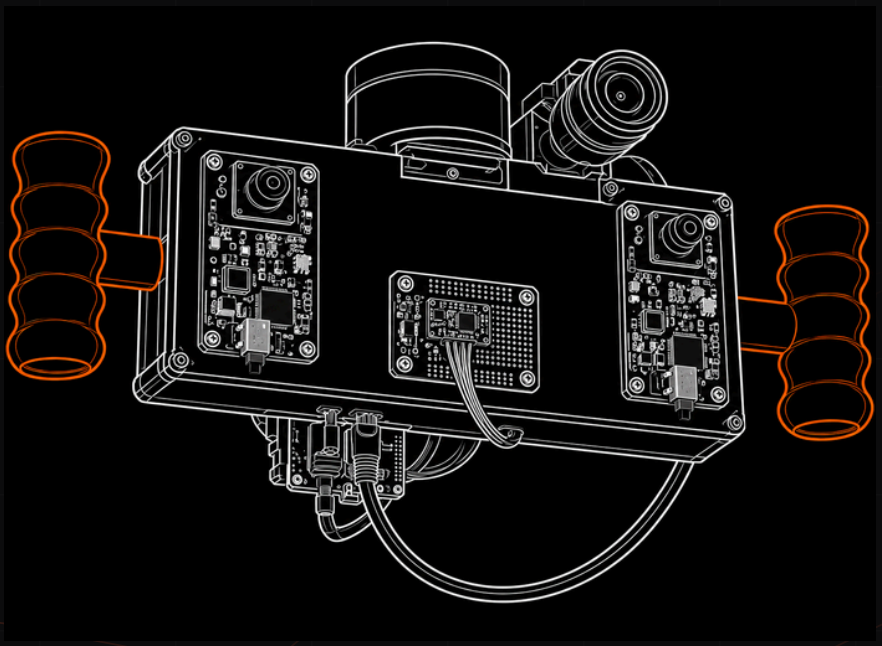

## HANDHELD 3D SCANNER

ARGOS is a hand-held 3D scanning device built by ROAM. It captures spatial data and reconstructs detailed 3D meshes of real environments.

It combines LiDAR, depth cameras and GNSS/RTK positioning in a custom enclosure, and it's the foundation the ATLAS-1 rover builds on.

### CORE CAPABILITIES

- // SLAM
- // Visual Odometry
- // Embedded Computing
- // Custom mechanical design
- // Real-time data processing

[ SYSTEMS OPERATIONS // 05 ]

# NOW BUILDING: ATLAS-1

ATLAS-1 is ROAM's autonomous mapping and inspection rover, now in active build. It takes everything ARGOS proved and puts it on wheels.

## [ ON BOARD ]

| | |
|---|---|
| PERCEPTION | LiDAR, depth sensing, GPS/IMU modules and proximity sensors |
| COMPUTE & CONTROL | Primary compute unit with supporting processors, storage and cooling |
| ELECTRONICS | Custom-fabricated PCBs with conformal coating |
| POWER | Primary battery system, voltage conversion and safety hardware |
| COMMUNICATION | Telemetry radio, antennas and onboard networking |
| CHASSIS | Custom drivetrain, mounting systems and 3D-printed enclosures |

## [ BUILD ROADMAP ]

| | |
|---|---|
| PHASE 1<br>● UNDERWAY | Foundation & Procurement<br>Finalize system architecture, source components and fabricate the chassis. |
| PHASE 2 | Hardware Integration & System Bring-Up<br>Assemble electronics, power and drivetrain, then bring each subsystem online. |
| PHASE 3 | SLAM Integration & Autonomous Navigation<br>Integrate the mapping stack and develop autonomous navigation. |
| PHASE 4 | Testing, Refinement & Showcase<br>Field testing and tuning, then public demonstrations with our partners. |

# WHERE YOUR SUPPORT GOES

Every contribution maps to real ATLAS-1 hardware.
Here's what each level makes possible.

| | |
|---|---|
| $500 | **The full communication system**<br>Telemetry radio, antennas and onboard networking hardware that keep ATLAS-1 connected in the field. |
| $2,500 | **The complete chassis & drivetrain**<br>Wheels, drivetrain, mounting systems and 3D-printed electronics enclosures: The physical rover. |
| $6,000 | **The entire electrical system**<br>Custom PCBs, primary compute, the perception sensor suite and the battery and power system. |
| $15,000 | **The whole ATLAS-1 build**<br>Every mechanical, electrical and communication component on the rover. |

## [ IN-KIND CONTRIBUTIONS ]

Hardware, software and services count too. Approved in-kind contributions are recognized at fair-market value, on the same tiers as cash. We're especially looking for:

- LiDAR & depth sensors
- Embedded compute
- PCB fabrication & assembly
- Machining & materials
- Batteries & power electronics
- Software licences

# SPONSORSHIP TIERS

## TITLE ★ MOST IMPACT

### $4,000+

Everything in Gold, plus:

- → "Powered by [you]" naming of an ATLAS-1 subsystem
- → Primary logo on the rover, apparel front and website header
- → Booth at ROAM showcases and demo days
- → Engineer mentorship and a dedicated recruiting session
- → Quarterly progress report from the team

## GOLD

### $2,000+

Everything in Silver, plus:

- → Logo on an ATLAS-1 body panel
- → Medium logo on the back of team apparel
- → One hosted workshop, tour or info session with members
- → Recognition in competition presentations and technical documentation

## SILVER

### $1,000+

Everything in Supporter, plus:

- → Small logo on team apparel
- → One dedicated sponsor feature post
- → Logo on showcase and info-night signage
- → Your Job and internship postings shared with members

## SUPPORTER

### $500+

- → Logo on the ROAM website partners page
- → Logo in this package's partners section
- → Thank-you post on LinkedIn and Instagram
- → Twice-yearly partner progress update

[ 12-MONTH TERM ]

All benefits run for one year from the date of contribution.

[ IN-KIND COUNTS ]

Hardware, software and services are recognized at fair-market value.

[ Custom Packages ]

Want a different mix? We'll build a package around your goals.

[ SYSTEMS OPERATIONS // 08 ]

# BEYOND THE LOGO

The best partnerships involve your people, not just your brand. These are included at the tiers shown, or available as part of a custom package.

SILVER+ GOLD+ TITLE CUSTOM

SILVER+

### Recruit directly

Job and internship postings shared with members, plus an on-campus info session for your team.

GOLD+

### Host a technical workshop

Teach members a tool, technique or product your engineers use every day.

GOLD+

### Facility tour

Bring members to your office, lab or site to see how the work happens.

TITLE

### “Powered by” naming

Your name on an ATLAS-1 subsystem: “Perception powered by [you].”

TITLE

### Mentor a subsystem team

Pair one of your engineers with the students building a part of the rover.

TITLE

### Demo-day booth

A presence at ROAM showcases, alongside the robot your support helped build.

CUSTOM

### Field-test your product

Run your sensor, software or hardware on ATLAS-1 and get real-world performance feedback.

CUSTOM

### Co-createed content

An engineering feature or video showing how your technology is used on the rover.
